Board Report

Advent, a data wiring company who does the contracting for e-rate, was in February 5-8th to run cables for security cameras and data drops. They finished their phase of the project on the 13th with some additional finishing touches (conduit & port box covers). The representative from FSC was in as well for a few hours around the 7th to let us know that his people would be ready in about a month to install the new cameras and equipment (early March). The current camera system will remain active until the new cameras are installed.
